## ❖ Company Profile

Simmir Vision Technologies Co., Ltd. is a national high-tech enterprise dedicated to building AI terminal video understanding systems, providing comprehensive solutions of productive process management and real-time video analysis for manufacturing industry. Established in 2019, our company has built a research and development team comprising over 70% of workforce.

Our R&D team has long been committed to research in computer vision, action recognition, edge computing, hardware accelerators, and human-machine collaboration. We have a profound theoretical foundation and extensive practical experience in areas such as video analysis networks, model compression, terminal computing architectures, etc.

Simmir's proprietary products including Event Recording and Tracing System (SERT), Visual Personnel Protection System (SVPP), Productive Action Recognition System (SPAR), Video Analysis Platform (SVAP), Artificial Intelligence Integrate Platform (SAIP), Equipment and Data Center (SEDC), and EventNAS have been widely applied in various industries, including automotive, 3C, new energy, semiconductor, home appliances, rail transportation, biomedicine, etc.

# EventCAM 2D

EventCAM 2D is an industrial event recording camera with high-performance image capture and video processing capabilities. It is capable of capturing and recording events within the industrial control system in real time, generating important short video records for further analyze and monitor. At the same time, it features industrial data collection and protocol streaming functions. It can integrate with PLCs or robots to obtain real-time status from the control system, including fault alerts, production signals, workpiece scanning results, etc. With comprehensive industrial bus communication protocols, it facilitates seamless integration with production lines.

EventCAM 2D offers ultra-high 4K resolution and 240FPS frame rate. High-performance SOCs, ISPs, and low-latency video encoding IP are utilized in EventCAM 2D to ensure image quality.

- Zero-threshold operation: No software is needed to be installed on the PC. Industrial applications can be implemented without code basics.
- Openness and ease of use: Various communication interfaces can meet various data exchange requirements, enabling efficient data exchange.
- Flexible deployment: Various installation methods are supported for complex installation environments.
- High imaging quality: The camera can produce high-resolution and high-quality video data.
- Wide range of applications: The application can comprehensively cover typical industrial scenarios, enabling efficient data exchange.
- Technological innovation: Terminal video understanding algorithms, model compression, and chip architecture coupling.
- Beyond basic functions: Supports event recording, state monitoring, log recording, cluster management, and more.
- Strong adaptability: Adaptable to most of the robots of the mainstream brands and various types of industrial equipment.

## Specification

Model	XMR-ARJ335	XMR-POEJ335
Specifications	-	POE
Resolution	5MP	5MP
Sensor	1/2.8", CMOS	1/2.8", CMOS
Shutter	Rolling Shutter	Rolling Shutter
Frame Rate	30fps	30fps
Mono/Color	Color	Color
Lens Mount	C/CS/S	C/CS/S
Voltage	24VDC	-
Current	0.5A	-
Light Source	White Light	White Light
Size	83.4*51.8*71mm	83.4*51.8*71mm
Weight	300g	300g
Installation Dimensions	2-M4, depth: 5mm, hole pitch: 35mm	
External Interfaces	M12 Aviation Plug*2	M12 Aviation Plug*2
Digital I/O Interfaces	4 channels of optocoupler isolated I/Os, 24V PNP/NPN; Driving capacity of 50mA, able to drive small and medium-sized relays	
Industrial Fieldbus Interfaces	1 channel of isolated 485 interfaces supporting ModbusRTU protocol	
Industrial Ethernet Interfaces	1 gigabit ethernet interface supporting ModbusTCP、TCP/IP、UDP、HTTP、MQTT、FTP、RTSP、Websocket、Profinet、Ethernet/IP	
Operating Temperature	-20°C~45°C	-20°C~45°C

# AI EventCAM 2D

AI EventCAM 2D is an AI-powered video event trigger camera, which is an upgraded version of EventCAM 2D. Apart from all the original functions of EventCAM 2D, it is also equipped with AI and DSP engines to enhance the video understanding capability at the edge. A lightweight video processing AI network model and a real-time operating platform are embedded in the system to implement fast and accurate recognition of people's presence, action recognition, trajectory classification, anomaly detection, etc.

AI EventCAM 2D also offers ultra-high 4K resolution and 240FPS frame rate. It was developed on the heterogeneous chip architecture platform, and the self-developed video understanding AI models were highly optimized. It incorporates a low-latency video encoding IP and ISP module to provide high-quality images and videos.

- **Powerful AI processing capability:**  
It can efficiently process videos and images for frame rates of over 60FPS.
- **Openness and ease of use:**  
Various communication interfaces can meet various data exchange requirements, enabling efficient data exchange.
- **Zero-threshold operation:**  
No software is needed to be installed on the PC. Industrial applications can be implemented without code basics.
- **Accurate analysis:**  
Embedded with multiple pre-trained 2D video understanding models trained on extensive datasets.
- **Beyond basic functions:**  
Supports event recording, state monitoring, log recording, cluster management, and more.
- **Rich software:**  
Video Analysis Platform (SVAP), Artificial Intelligence Integrate Platform (SAIP), Equipment and Data Center (SEDC).
- **Wide range of applications:**  
The application can comprehensively cover typical industrial scenarios.
- **Flexible deployment:**  
Various installation methods are supported for complex installation environments.
- **Technological innovation:**  
Terminal video understanding algorithms, model compression, and chip architecture coupling.
- **Strong adaptability:**  
Adaptable to most of the robots of the mainstream brands and various types of industrial equipment.

# EX EventCAM 2D

EX EventCAM 2D is an industrial event trigger camera that complies with the Ex ib IIC T6 Gb/Ex ib IIIC T80° C Db intrinsic safe explosion protection standards for harsh conditions in explosive atmospheres.

The EX version is an extended version of the EventCAM 2D and AI EventCAM 2D. Its hardware has been specially adjusted to meet the requirements of automated production lines for pyrotechnic products as well as flammable and explosive products. Overall hardware optimizations including on circuit design, electronic components, manufacturing processes, housing structure, assembly processes, as well as testing and aging processes. Significant improvements and enhancements have been made, particularly in protection rating, power supply safety, short-circuit protection, overheating detection, and alarm.

- **Wide range of applications:**  
It can comprehensively cover automated production lines for pyrotechnic products as well as flammable and explosive products.
- **Openness and ease of use:**  
Various communication interfaces can meet various data exchange requirements, enabling efficient data exchange.
- **Zero-threshold operation:**  
No software is needed to be installed on the PC. Industrial applications can be implemented without code basics.
- **Flexible deployment:**  
Various installation methods are supported for complex installation environments.

- **Strong adaptability:**  
Adaptable to most of the robots of the mainstream brands and various types of industrial equipment.
- **Technological innovation:**  
Terminal video understanding algorithms, model compression, and chip architecture coupling.
- **Accurate analysis:**  
Embedded with multiple pre-trained video understanding models trained on extensive datasets.
- **Safety and reliability:**  
Complies with the Ex ib IIC T6 Gb/Ex ib IIIC T80° C Db intrinsic safety explosion protection standards for harsh conditions in explosive atmospheres.
- **Comprehensive software toolchain:**  
Supports self-defined safety detection functions such as 2D spatial personnel presence detection, abnormal trajectory detection, and more.

# Safety EventCAM 2D

Safety EventCAM 2D is a safety event detection camera that complies with PL d standard, as well as ISO13849, IEC61508, and IEC60201 certification standards. Based on AI EventCAM 2D, Safety EventCAM 2D incorporates multiple redundancies including hardware, operating system, software algorithms, and safety outputs. It is also equipped with a comprehensive status detection system.

Safety EventCAM 2D aims to provide the automation industry with a new safety protection option. It utilizes advanced technology to address the human protection problems in the industry. This product can meet stringent safety requirements and provides comprehensive event detection and recording at the same time.

- Zero-threshold operation: No software is needed to be installed on the PC. Industrial applications can be implemented without code basics.
- Flexible deployment: Various installation methods are supported for complex installation environments.
- Wide range of applications: The application can comprehensively cover typical industrial scenarios.
- Strong adaptability: Adaptable to most of the robots of the mainstream brands and various types of industrial equipment.

- Technological innovation: Terminal video understanding algorithms, model compression, and chip architecture coupling.
- Stability and accuracy: Real-time sampling and cross-checking of multiple chip power rails, hardware redundancy for safety outputs, and more.
- Openness and ease of use: Various communication interfaces can meet various data exchange requirements, enabling efficient data exchange.
- Comprehensive software toolchain: Supports self-defined safety detection functions such as 2D spatial personnel presence detection, abnormal trajectory detection, and more.
- Safety and reliability: Dual/triple-redundant isolated safety outputs, dual CPU hardware redundancy verification, dual hardware watchdogs, and more.

EventCAM 3D is a product isomorphic to EventCAM 2D in terms of the underlying structure, and their operation is also the same. It adds 3D image capture and computation to AI EventCAM 2D. EventCAM 3D combines traditional 3D camera features with an embedded processing system. It is capable of transmitting high-quality RGB-D images and supports AI processing without the need for a separate industrial computer, thanks to its integrated AI processor.

With the embedded self-developed video understanding algorithms, EventCAM 3D supports a wide range of out-of-the-box features, making it very user-friendly. Its system latency is also far lower than separated architectures, allowing flexible applications in various scenarios. It aims to further lower the barriers of 3D+AI applications and realize codeless deployment.

- Flexible deployment: Various installation methods are supported for complex installation environments.
- Strong adaptability: Adaptable to most of the robots of the mainstream brands and various types of industrial equipment.
- Technological innovation: Terminal video understanding algorithms, model compression, and chip architecture coupling.
- Approach innovation: Simultaneously deploy 2D/3D video understanding to heterogeneous chip internals at the edge.
- Comprehensive software toolchain: Supports custom 3D spatial foreign object intrusion detection, abnormal trajectory detection, and more.
- Accurate analysis: Embedded with multiple pre-trained video understanding models trained on extensive datasets.
- Beyond basic functions: Supports event recording, state monitoring, log recording, cluster management, and more.

# EventNAS

EventNAS is a customized storage device for industrial data. It provides robust support for the EventCAM series of products. EventNAS offers data storage capability with high capacity, high reliability, and easy maintenance, supporting multiple access protocols.

EventNAS is developed on high-performance multi-core SOC chips, providing space for multiple hard drives and running a customized Linux system. It is equipped with RAID to ensure data safety even if a single hard drive fails. In addition, EventNAS can serve as a high-performance industrial computer with ample memory, high-speed storage media, and various industrial communication interfaces. Users can customize the system according to their needs to achieve industrial "storage + data acquisition + control" integration.

- **Zero-threshold operation:**  
No software is needed to be installed on the PC. Industrial applications can be implemented without code basics.
- **Technological innovation:**  
The abundant resources of AI-SOC in the system replace industrial computers with traditional X86 architecture.
- **Openness and ease of use:**  
Various communication interfaces can meet various data exchange requirements, enabling efficient data exchange.

- **Industrial-grade product:**  
Satisfies the demands in data processing, storage, and transmission in industrial production, providing stable and reliable data services.
- **Robust storage:**  
Capable of storing vast amounts of industrial equipment data from EventCAM, robots, machines, etc.
- **Efficient collaboration:**  
Multiple types of devices can be connected to facilitate information sharing and collaboration between devices.
- **Flexible configuration:**  
Enables setting of remote push and data reporting functions as needed, facilitating real-time data exchange and monitoring.

## SVAP Simmir Video Analysis Platform

SVAP is a video intelligent analysis platform that supports large-scale localized data center deployment. It is compatible with Simmir's intelligent hardware or third-party hardware products and provides open and accessible SDK interfaces. The system offers functions such as device access and management, device cluster configuration, AI model library configuration, video analysis and calculation, database and data querying, multimedia visualization, etc.

## SAIP Simmir Artificial Intelligence Integrate Platform

SAIP is a cloud-based AI training platform. It has functions including video pre-processing, data labeling, dataset management, model training, model testing, model management, model conversion and downloading. It can integrate seamlessly with all of Simmir's hardware and software products and platforms. SAIP also offers localized deployment services for users with high data confidentiality requirements.

## SEDC Simmir Equipment and Data Center

SEDC is a platform for management on self-developed hardware products and data. It supports large-scale device access and cluster management and can handle massive multi-dimensional data. SEDC has various out-of-the-box functions, including device status monitoring, communication data management, data labeling and statistics, label management, reporting, and visualization. SEDC also provides open and accessible SDK interfaces for users. It supports both localized and cloud-based deployment.
